SIDDHIVINAYAK EXTRUSION PVT. LTD.

SIDDHIVINAYAK IMPEX

Premier brand in the Copper and Copper Base Alloys Sector - Estd. 1979

We are a leading name in the copper and copper alloy industry.

We have a successful history in manufacturing quality products for the Indian as well as the international market. Our reputation is built on customer satisfaction and dedication to quality.

All of our copper and copper alloy products comply with applicable IS, BS, DIN, ASTM and JIS standards, as well as specific customer requirements.

Our facility includes all essential machinery, in-house laboratories and testing facilities to ensure products meet electrical, mechanical and chemical quality requirements at every stage of production.

List of Machines:

Melting Furnaces ✎ Extrusion Press ✎ Draw Benches ✎ Annealing Furnace (Gas, Oil, Electric)

Straightening Machines ✎ Swaging Machines ✎ Hydraulic Sizing ✎ Vickers Hardness Testing machine

Tensile testing ✎ Spectrometer ✎ Eddy current ✎ Pneumatic testing

Copper Pipes and Tubes

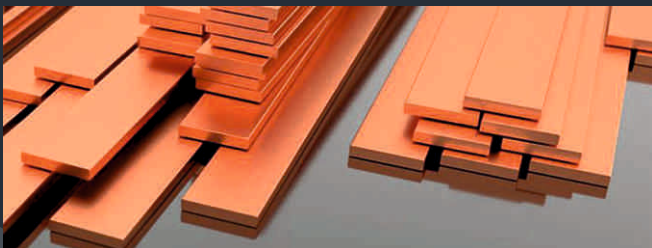

Siddhivinayak offers seamless copper tubes in a range of sizes. Both bright annealed pancake coils and hard drawn straight lengths of these tubes are available. These tubes are made in compliance with the national and international standards set by the client.

Copper Rods

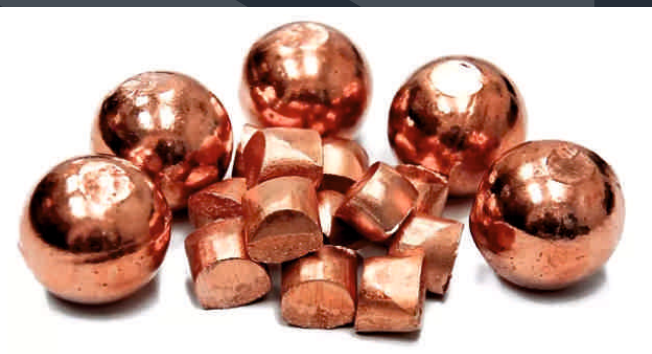

Siddhivinayak Group of Companies is one of the leading manufacturers and suppliers of top-quality copper rods. These bars are known for their dimensional accuracy, high-quality raw materials, structural robustness, and excellent finish. The mechanical engineering and electrical industries are making the most of these copper rods. We manufacture extruded and drawn copper rods of various dimensions in various shapes such as circles, hexagons, squares and rectangles.

Copper Busbars, Strips, Sheets & Flats

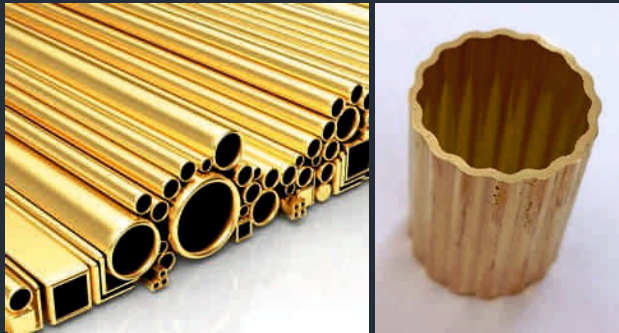

Copper strips have many uses as conductors, switch terminals, the hardware used in electrical circuits, and electrical contacts. These copper strip products are available in hard, semi-hard, and soft conditions. Our Phosphorus Copper Anodes are extensively used in industries such as Electroplating, automotive, and others. We are renowned to set the quality standards in the 1-gram gold plating anodes across India.

Copper Anodes, Nuggets & Balls

The Siddhivinayak Group has introduced special purity copper nuggets made from pure copper cathodes for decorative applications, gravure printing, printed circuit boards, electroground rods, electroforming, and many other functional plating applications. We are renowned to set the quality standards in the 1-gram gold plating anodes across India.

Brass Pipes 63/37

The Siddhivinayak Group is one of the leading manufacturers, exporters and suppliers of 63/37 brass pipes. Manufactured by experienced professionals in accordance with established industry rules and regulations to ensure excellent performance, durability, quality construction, reliable operation and corrosion resistance. Our 63/37 brass tubes are available in standard and custom shapes, at competitive prices and are used in a variety of global sectors. We manufacture Square (up to 6 inches), Rectangle, Round pipes up to 12 inches, Half-Round, and any desired shape and wall thickness as per customers drawing.

Brass Pipes 70/30

We specialize in producing the highest quality 70/30 brass tubes for export and supply. The 70/30 brass tube, sometimes referred to as the Sugar Brass Tube is indigenously produced with precision. 70/30 brass tubes are available in different grades and specifications to meet the diverse needs of our customers.

Admiralty Brass Tubes

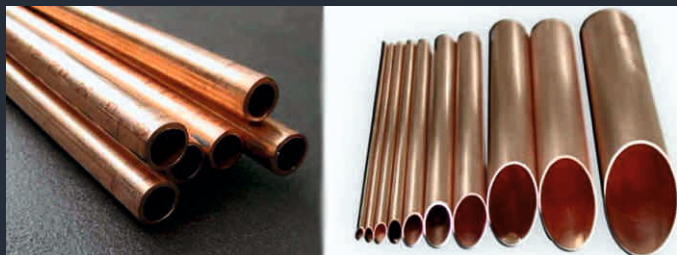

Admiralty brass tubing is especially used for steam condenser tubing cooled in freshwater, saltwater, or brackish water due to its high corrosion resistance. Admiralty metal tubes are also used in petroleum refineries, water heaters, heat exchanger systems, and other industrial processes where corrosion by sulfur compounds and contaminated water can be particularly severe.

Aluminium Brass Tubes

Aluminium brass tubing is widely used in condenser tubing because it can withstand the impact of high-speed salt and dark water. Its main feature is its strong resistance to impingement attacks. Pipes made of these alloys are recommended for use in marine and onshore power plants where the cooling water flows at high speed.

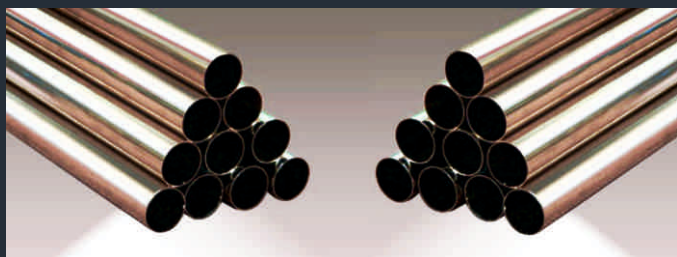

Cupro Nickel Products

Cupro Nickel 90/10

90/10 Cupronickel is commonly used in seawater. Even with the non-condensable gas dissolved, it exhibits very strong corrosion resistance to clean, moderately contaminated sea and estuary water. This alloy is largely unaffected by stress corrosion cracking and denickelification.

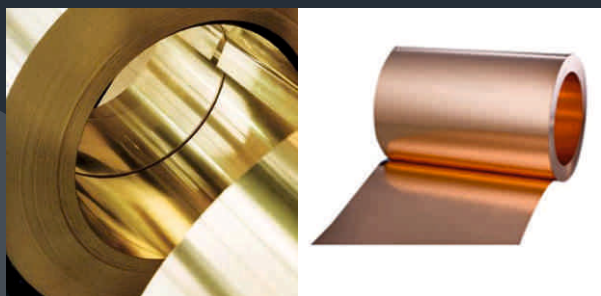

Cupro Nickel 70/30

70/30 cupronickel is recommended primarily when the operating conditions (cooling water, steam, condensate, temperature, etc.) are very severe and virtually all other copper metals are excluded. Due to its hardness and surface self-protecting oxide properties. Like all cupronickels, 70/30 cupronickels are largely unaffected by stress corrosion cracking.

Powders

Technology

The production process that we have established uses the latest technologies for all of our production processes, creating high efficiency in our working system. We use the most advanced machinery for all of our production processes and have all our systems with high-quality precision. Continuously updating our machines and processes helps us produce high-quality products, reduce waste, meet environmental standards, increase productivity and manufacture products without any possibility of error. We always strive to meet every customer's needs and maintain precision in all the products we offer.

Our Mission

Our Mission is to constantly rise to improve the satisfaction of every customer associated with our business. Our mission is to provide consumers worldwide with affordable, high-quality products that meet customers' standards for copper, copper alloys and brass tubes. We believe the industry will thrive in the future with high-quality products.

Our Vision

Our dream is to be the invincible leader of the global Metal industry

Our Values

We are a scrupulous company that operates on values, which glorify our goal to win the market competition by indulging in the right doings.
